

TOP BOLT™ TRANSFORMER SAFETY MANUAL

Installation Guide & Owner's Manual

OPT-RP-LEDMD

WARNING: FOR OUTDOOR USE ONLY

****READ THIS MANUAL BEFORE INSTALLATION OF THE UNIT***

WARNING:

Improper installation, adjustment, alteration, service, or lack of maintenance can cause injury or property damage. Read the installation, operating, & maintenance instructions thoroughly before installing or servicing this equipment.

WARNING:

The Outdoor Plus suggests that our products be installed by professionals that are locally licensed by the authority having jurisdiction in gas piping. Our products should be serviced annually by a professional certified in the US by the National Fireplace Institute (NFI) as Gas Specialists or in Canada by WETT (Wood Energy Technical Training).

GENERAL GUIDELINES

When you choose GFCI compatible, TOP Bolt Transformer™, you will also receive up to 4 RGB flexible LED lights. These are made in-house, and can be customized depending on your project goals.

Plastic RGB Brackets will be pre-mounted on your Fire or Fire & Water Bowl. Contact the manufacturer before placing the order if you are interested in custom placement of the LED lights.

Your TOP Bolt™ Transformer is designed to fit up to 4 RGB LED lights. These flexible lights are designed to be waterproof, but the transformer must **NEVER** be submerged in water. This may irreparably damage the transformer.

SELECTING THE LOCATION

The ideal location for the TOP Bolt™ Transformer is inside your Fire Bowl or Fire and Water Bowl. Contact the manufacturer if you plan to install your hi-voltage TOP Feature near a body of water. It is highly recommended to special order additional extension cords, and adhere to additional installation procedures for your safety.

If you intend to install your Fire or Fire & Water Bowl near an open body of water you must install your hi-voltage Transformer a minimum of 5ft from the edge of the body of water. It is strongly recommended you install your transformer in a lockable weather proof enclosure 10ft from the edge of an open body of water.

Always check local electrical codes as they may be stricter than the national guidelines (NEC).

INSTALLATION & USAGE

Attached to the TOP Bolt™ Transformer are 4 male connectors (Fig 1). While holding the male end, attach the female end found on the RGB lights (Fig 2). If you special ordered an extension, you will attach the transformer to the extension first and then the extension cord will attach o the RGB LED light.

Be sure to secure the male and female connectors, and then place the LED light into the plastic RGB bracket (Fig 2). The brackets are pre-installed on your Fire or Fire & Water Bowls. Be sure the light is attached to the bracket with the *groove side down*. You may either slide in the light or snap it into the bracket.

Once you plug in the transformer, your LED lights are ready to go. TOP LED lights must be operated using The Outdoor Plus App. Follow the instructions on how to set up your LED Lights. You can find the manual ▶ *LED Lights Control Manual* on our website.
